

# Study on Influence of **Substrate Water Level** for Germination of ***Spinacia oleracea***

Takayuki Okuda  
TAKII & COMPANY, LIMITED

# Low germination by excessive water

Moderate moisture

Excessive moisture

Seeds in excessive moisture condition

# Structure of Spinach seed

Cross-section of large, medium and small seed

(From Magnée, 2022.)

# ISTA PT22-2 ; *Spinacia oleracea*

Accredited labs (107)

Voluntary participants (71)

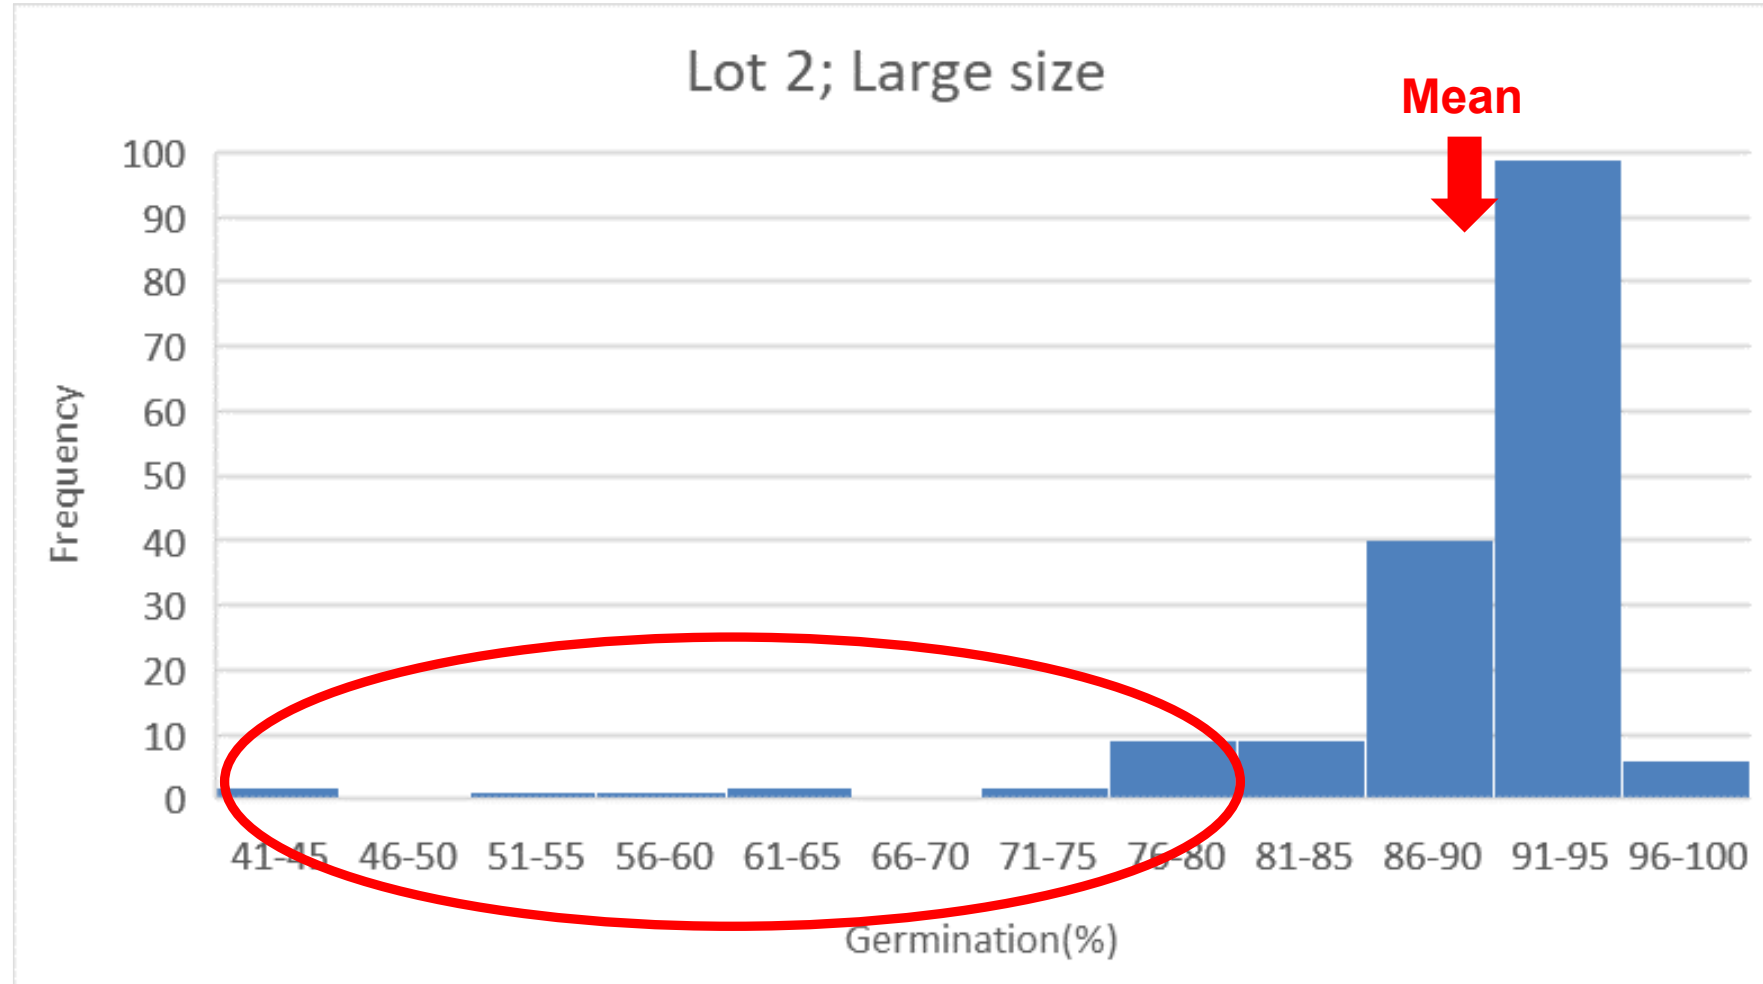

2<sup>nd</sup> worse for voluntary participants

## Means and Standard Deviation

Categories	Mean values %			Standard Deviation		
	Lot 1	Lot 2	Lot 3	Lot 1	Lot 2	Lot 3
Normal seedlings	94	89	95	7.11	8.27	4.97

Lot 1	Medium	2.75-3.5mm
Lot 2	Large	>3.5mm
Lot 3	Small	<2.75mm

# Lot 2; Large size : Dispersion

# Comparative study

## Seed material

- ISTA PT sample (Secretariat storage)

Lot 1: Medium

Lot 2: Large

Lot 3: Small

## Test method

- Pleated paper; 15°C

- Water added

**100%, 90%, 80%, 70%, 60%, 50%** (Water holding capacity)

# Test result ; Time course of normal seedlings

Lot 1 ; Medium

Lot 2 ; Large

Lot 3 ; Small

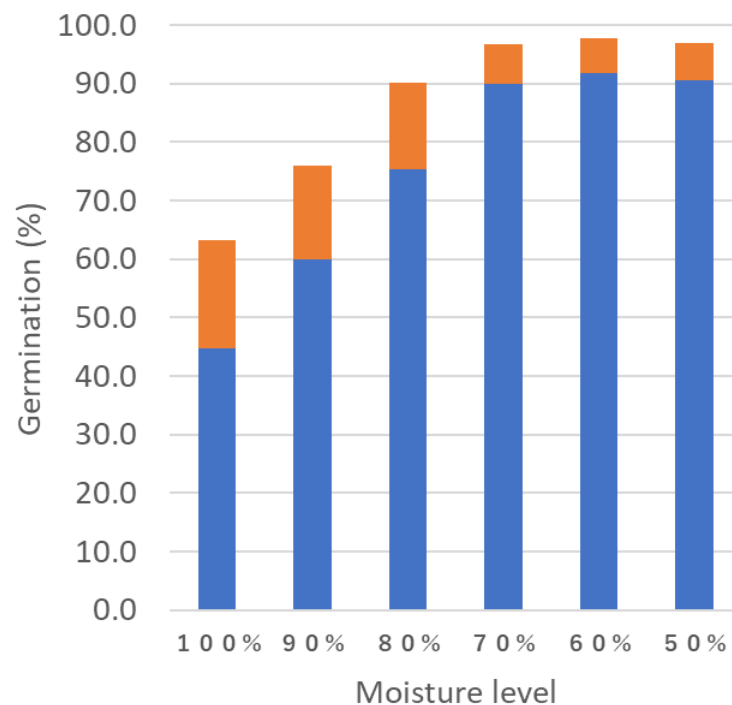

— 100% — 90% — 80% — 70% — 60% — 50%

# Test result ; Final germination rate

Lot 1 ; Medium

Lot 2 ; Large

Lot 3 ; Small

■ Normal ■ Abnormal

# Test result

**Water level: 50%**

## Conclusion

- *Spinacia oleracea* seed is **sensitive to moisture** in germination
- Large seed is more sensitive than small seed
- Water content of the substrate greatly influenced the germination test result
- It is recommended **using lower moisture levels in substrates for *Spinacia oleracea* germination**

Thank you

 **ISTA ANNUAL MEETING 2024**  **01-04 JULY CAMBRIDGE, UNITED KINGDOM**
